

# eCASE<sup>®</sup> App Designers

## Build Custom Apps with Ease

### Automate Any Business Process through Low-Code Tools

The eCase App Designers allow custom app configuration through visual, drag-and-drop, and block-based tools. Within the integrated development environment (IDE) of the eCase App Designers, citizen developers and process owners can build any app to suit their organization's needs, without the need for custom coding.

### Features and Capabilities

#### App Wizard

The eCase App Wizard enables the creation of a basic app in four simple steps.

1. Choose your app name.
2. Enter case type information including name, description, type code, and associated offices.
3. Select form template styling and form fields. The case data model enables a data-first approach.
4. Add users for the app.

Once complete, you can begin to build your app out through the low-code, model-driven App Designers.

#### UI Designer

Configure the look and feel of your app without the need for third-party software. UI settings and responsive forms ensure the app will look attractive on any screen or device.

- Create UI screens and forms for case type, attachment properties, apps, portals, and offline forms for remote clients.
- Customize header items, search scope, navigation, terminology, data views, dashboards, and more.
- Use intuitive containers and controls to create form templates.
- Access pre-loaded case fields, field groups, and case actions.

#### Workflow Designer

Through drag-and-drop and connecting elements, visually create, view, and edit well-defined, structured, and repeatable workflows.

- Choose from model elements (workflow steps) such as human, process, user event, timer event, and end event elements.
- Assign workflow tasks to specific users.
- Configure conditions to trigger elements at various stages in the workflow.
- Define the attributes of workflow elements including name, role, and order of activities.

## Key Benefits

- **Accelerate Development**  
Quickly build and deploy apps in a fraction of the time of custom development.
- **Reduce O&M Cost**  
Unify your business process apps on a single platform to reduce IT overhead and simplify operations.
- **Drive Adaptability**  
Configurable tools allow you to adapt your eCase solutions to new requirements.
- **Power Accessibility**  
Without the need for custom coding, any business user can build and configure apps in eCase.
- **Modernize Processes**  
Streamline and automate your case management processes on one platform to gain enterprise visibility across apps.
- **Extend System Life**  
Flexibility of the platform enables apps to grow with your organization, lowering implementation and change costs and increasing ROI.

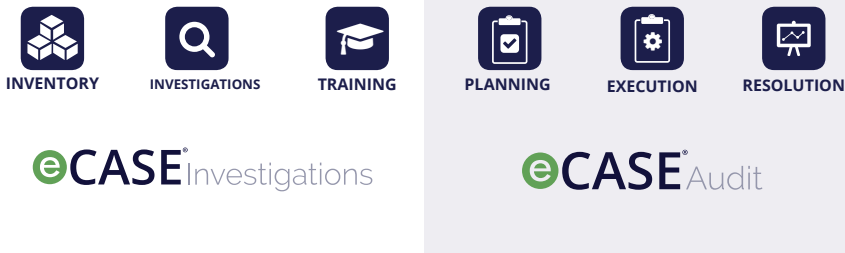

# Audit and Investigations for OIGs

## Why host OIG audit and investigations on a single platform?

Today's leading organizations demand transparency and accountability at all levels of the enterprise. How do you ensure your OIG audit and investigations teams are able to stay ahead?

With eCase, unify your processes for greater transparency, efficiency, and security in your applications. Use powerful eCase tools to configure your OIG applications exactly as they should be.

## Benefits

- > More Efficient**  
 Unified processes and comparable features such as reporting, dashboards, and letter templates allow for ease of training between applications, increasing efficiency and reducing cost.
- > More Transparent**  
 All actions are tracked and reports are generated by the click of a button. In the event of a case traveling between OIG audit and investigation offices, easily understand the case history and scope through enterprise reports.
- > More Secure**  
 eCase applications are hosted SaaS in our FedRAMP-certified data center or on-premises.

### About AINS

AINS, Inc. has provided innovative adaptive case management products and services since 1988. Our digital process automation platform, eCase, is used by over 400 federal agencies and offices, state and local governments, educational systems, health institutions, and commercial customers. Unlike BPM products that were retrofitted for case management, eCase was built for case management from the ground up, enabling faster prototyping and production of solutions across diverse business processes. By leveraging the power of our eCase platform, AINS excels at analyzing client business requirements and quickly configuring (not coding) scalable solutions that adapt to the needs of our customers. We are committed to more than just selling products—we are dedicated to helping our customers enhance productivity, cut costs, and, most importantly, achieve success.
